PROJECTS

CareerEvidence - AI-Era Student Employability Platform (Ongoing)
React.js, TypeScript, Vite, Node.js, Express.js, PostgreSQL, Python NLP

- Building a full-stack platform that helps engineering students and recent graduates pick target roles and see where their skills fall short of job requirements.
- Wrote the React + TypeScript (Vite) frontend and a Node.js/Express (TypeScript) REST backend on PostgreSQL, with JWT sessions that expire and hashed passwords.
- Added Python NLP components that read job descriptions, extract skills and classify roles. Each skill gets an evidence rating: Missing, Partial, Good or Strong.

SkillSync - AI-Based Student Skill & Mentorship Platform | GitHub
React.js, FastAPI, Python, MongoDB, GitHub Actions

- Built 12+ REST API endpoints for login, profiles, skill assessment and recommendations.
- Made React dashboards for progress tracking, connected to a FastAPI backend with asynchronous MongoDB access.
- Secured the app with Argon2 password hashing, JWT (OAuth2 bearer) login and role-based access control.
- Set up a GitHub Actions pipeline for build and deployment.

Metadata Image & Video Anonymizer | GitHub | Live Demo
React.js, Python, FastAPI, OpenCV, Docker, Vercel, GitHub Actions

- Built a FastAPI service that finds and removes EXIF/XMP metadata from images, videos and documents across 5 file formats.
- Built the React frontend and deployed it on Vercel; packaged the backend in Docker.
- Used asynchronous file processing, and GitHub Actions to automate build, test and deploy.
